

PTD-1 & 4 **CURRENT PROBE TEST DEVICE**

The Prodyn models PTD-1 & PTD-4 are devices designed to test and calibrate Prodyn spring clamp-on current probes. When probes are clamped over the conductor, current is driven through the probe from one connector and is terminated on the other with a matching impedance across the bandwidth of the generator used, thereby drawing full load current through the probe. Model PTD-1 accommodates models I-300, I-310 and I-320. Model PTD-4 accommodates models I-400, I-410 and I-415.

	<u>PTD-1</u>	<u>PTD-4</u>
A	1.250 [31.75]	2.250 [57.15]
B	2.750 [69.85]	2.812 [71.42]
C	1.500 [38.10]	2.000 [50.80]
